IN THE CLAIMS

Please **AMEND** claims 53-55 and 58 are follows.

1-52. (CANCELED)

53. (CURRENTLY AMENDED) A computer readable storage that stores object oriented programming objects accessible by objects ~~component storage medium~~, comprising:

a data structure that defines a component to serve ~~storage for a component which serves~~ as one object in combination with existing software having a graphical user ~~interface,~~ ~~said component~~ interface, by storing data related to the existing software having the graphical user interface and storing as an operation method related to the existing software, a program code controlling a data processing system according to a process of issuing an event of the existing software in response to a received message issued in another object ~~object; and~~

~~a list storing at least one pointer that indicates at least one function that is executed when the message is received.~~

54. (CURRENTLY AMENDED) ~~A component storage medium~~The computer readable storage according to claim 53, wherein said component further includes a message for informing other objects that the event is issued.

55. (CURRENTLY AMENDED) A ~~component storage medium~~computer readable storage storing at least one program controlling a data processing system according to a process, comprising:

monitoring existing software having a graphical user interface for a predetermined event;

~~storage for a component which serves as one object in combination with existing software having a graphical user interface, said component including a message for informing other objects, upon receipt of occurrence of and~~defining a data structure for a component that serves as one object in combination with the existing software having the graphical user interface, by storing data related to the existing software having the graphical user interface and storing as an operation method related to the existing software, a program code controlling the data processing system according to a process of issuing a message to inform another object of the predetermined event of the existing software~~, that the event is generated; and~~

~~a list storing at least one pointer that indicates at least one function that is executed~~

~~when the other objects receive the message~~.

56-57. (CANCELED)

58.   (CURRENTLY AMENDED) A method ~~for~~<u>of replacing an existing software having</u> <u>a graphical user interface with one object oriented programming object accessible by objects,</u> ~~driving an application, having a graphical user interface, of a component,~~ comprising:

monitoring <u>the existing software</u> ~~the application~~ having the graphical user interface for a predetermined event;

<u>defining a data structure for a component that serves as the one object in combination</u> <u>with the existing software having the graphical user interface, by storing data related to the</u> <u>existing software having the graphical user interface and storing as an operation method related</u> <u>to the existing software, a program code controlling a data processing system according to a</u> <u>process of</u> ~~when the predetermined event is issued,~~ issuing a message to inform another ~~component~~<u>object</u> of the predetermined <u>event of the existing software</u> ~~event; and~~

~~executing at least one function that is indicated by at least one pointer that is stored in a~~ ~~list~~.
